

```
data = {  
    "name": "roshan",  
    "gender": "male"  
}  
data ["name"] = "thaswanth"  
print(data)
```

Above code is different

```
thisdict = {  
    "brand": "Ford",  
    "model": "Mustang",  
    "year": 1964  
}  
print(thisdict)  
  
print(thisdict["brand"])  
  
print(len(thisdict))  
  
print(type(thisdict))
```
